

The Maine Event

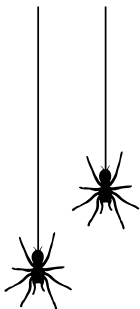

What is Fear?

By: Asher Young

Fear is a natural emotion that everyone experiences in some way or another. Some of the most common types of fear include fear of failure, rejection, being alone, public speaking, heights, and even fear of the unknown. People may also fear losing someone they love or not being accepted by others. Although fear can make us feel nervous or worried, it can also protect us from danger and help us make careful decisions.

Question of the Week

By: Arianna Graves & Natalie Evans

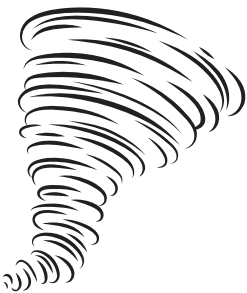

What are the top two most common fears at Maine Consolidated School?

Believe it or not, child loss is the highest on the poll of greatest fears in this school. Second on the list is spiders quite unsurprisingly. Lets elaborate on child loss, losing a child seems unbearable to many and by many I mean teachers. Since their primary job is to watch and teach children all day it makes sense as to why it's the highest of the poll of fears. Teachers are known for forming deep connections with their pupils and later crying on the last day of school because inevitably they, the teachers will miss us more than we ever miss them or so we say. Spiders on the other hand, look like creepy aliens that can't wait to crawl into your ear when you're sleeping. Many people fear spiders because of that reason. Can you really trust something that isn't labeled as an animal or an insect; add on that spiders have 8 legs; also add on that some tarantulas can be the size of a dinner plate. How gross is that? Disgusting and absolutely horrifying if you ask Ms. Gabby.

Natural Disasters

By: Kylee Giddens & Iris Ethridge

We asked 2 students and 4 teachers and staff what is the worst natural disaster in their opinion. Nathan, in 6th grade, chose a flood because floods can quickly cover roads, homes, and entire communities. Brylee, in 7th grade, chose a hurricane, which can bring powerful winds, heavy rain, and flooding. Mrs. Kennedy chose a tsunami, a huge wave caused by underwater disturbances that can cause major damage when it reaches land. Mrs. Mel chose the iceberg that broke off and started an avalanche in Nepal, showing how dangerous sudden changes in mountain and ice environments can be. Dr. J. chose Hurricane Katrina, which caused catastrophic flooding and destruction along the Gulf Coast in 2005. Finally, Mrs. Beatty chose a tornado, which can produce extremely strong winds and damage buildings in just minutes. Each of these disasters can be dangerous in different ways, showing why being prepared and knowing what to do during an emergency is important.

Scary Movies 101

By: Baylee Rawlinson & Elsie Christopher

Spooky movies come in many different forms, from creepy creatures and mysterious adventures to funny Halloween stories. We asked students and staff about some of their favorite spooky movies and shows. Some favorites included Coraline, A Quiet Place, Stranger Things, Goosebumps, Hocus Pocus, and Monster House. Spooky movies can use suspense, mystery, monsters, and surprises to keep audiences entertained. Everyone has a different idea of what makes a movies scary or fun! Remember to check a movie’s rating and make sure it is appropriate for your age before watching :)

Guess the Phobia

By: Danikah Giddens

Draw a Line to the Correct Definition

- Tryphobia
Arachnaphobia
Necrophobia
Ophidiophobia
Zoophobia
- Fear of Snakes
Fear of Animals
Fear of Spiders
Fear of Death
Fear of Little Holes

World Extinction

By: Noble Sapp & Jesse Slim

What killed the dinosaurs? Well most people say it's a meteor or a volcano or both at the same time; however we will never know because humans weren’t there. In addition, the world could end but it's not likely so much that our race will end the same way; most active volcanoes could not even dent on the human population while a meteor is way more likely to end all humanity but the chances are extremely low. As you may know space is mostly empty but could possibly end by the axis flipping; the sun exploding; nuclear fallouts; scarcity of resources. Either one of these would create a lot of fear within human beings. Lets hope we wont have to deal with world extinction in our life time. See you guys next time about the next conspiracy!

Comic Central

By: Emerson Muller

There has always been a joke about dogs eating kids homework, but what if it happend for real!

Natural Disaster Word Scramble

By: Syler Asmus & Henry Holland-Arnold

- Ronadot
- Dsfolo
- Aerhtuqakse
- Urhrciaen
- Fwil sdier
- Knsi oleh
- Udmlides
- Librzadz
- Etahevaw
- Nadllides

Word Scramble Answer Key
Ronadot – Torando
Dsfolo – Floods
Aerhtuqakse – Earthquake
Urhciaen – Hurricane
Fwil sdier – Wild fire
Knsi oleh – Sink hole
Udmlides – Mudslide
Librzadz – Blizzard
Etahevaw – Heatwave
Nadllides – Landslides

Answers to Guess the Phobia
Tryphobia – Fear of tiny holes
Arachnaphobia – Fear of spiders
Necrophobia – Fear of death
Ophidiophobia – Fear of snakes
Zoophobia – Fear of animals
